DETAILED ACTION

Election/Restrictions

The response filed on January 11, 2008 has been received and entered. As the elected invention, Applicants have elected as the monomer the fusion protein of Group 1 and as the dimer a homodimer that is two units of the fusion protein of Group 1. It was clearly explained in the Office action of May 23, 2007 that the different dimers are not species; they are different inventions. Applicants have elected the linker of claim 21(iii)(a) as the species of linker in the elected invention.

Upon reconsideration of the claims, it has been determined that further restriction is required. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows. Claim 30 recites fusion proteins that have two different structures: 1) E-L-F or 2) F-L-E, in which E is an enzyme (the elected binding domain), L is the linker (the polypeptide having at least one free cysteine in the monomer, located adjacent to or up to 45 amino acids away from the enzyme) and F is the functional domain (an antibody containing at least the Fab portion). In the first protein, the enzyme is N-terminal, while, in the second protein, the antibody (or functional domain) is N-terminal.

Applicants are required, in reply to this action, to elect a single species- either 1) E-L-F or 2) F-L-E to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicants will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicants must indicate which are readable upon the elected species. MPEP § 809.02(a).

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons. Each species is a different fusion protein, because each has a different structure and different chemical and biological properties, requiring a separate search for each.

Applicants are advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicants are reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
